NMED: AI Models and Costs

2.1 Model portfolio & AI cost

1. AI Tasks in the Product

#	AI task	Current model	Cheaper option	When we switch to a stronger model
1	Analyzing the ECG image and writing the report	gpt-5.6-sol	gpt-6.1-sol	If detection of key pathologies falls below 90% compared with the cardiologist's report, to gpt-6-astra
2	Extracting values from Holter and ABPM reports and writing the report	gpt-5.6-terra	gpt-6.1-terra	If the report is scanned or the model cannot read it, to gpt-5.6-sol
3	Reading and interpreting values from lab result sheets	gpt-5.6-terra	gpt-6.1-terra	If one analysis has more than 2 wrong units or impossible values, to gpt-5.6-sol
4	Combined summary across a patient's multiple analyses	gpt-5.6-sol	gpt-6.1-sol	If doctors correct more than 15% of AI summaries, to gpt-6-astra
5	Detecting the type of the uploaded document (classification)	gpt-5-mini	gpt-6-luna	No switch needed: if the type is not detected, the file is not blocked
6	Translating the report into Russian and English	gpt-5-mini	gpt-6-luna	If doctors find errors in medical terms, to gpt-5.6-terra

2. AI Cost per Analysis

Analysis type	1 analysis, $	1 analysis, UZS
ECG	0.11	1,330
Holter	0.06	730
ABPM	0.07	800
Laboratory	0.07	810
Combined summary	0.13	1,540

3. AI Cost per Customer

So far, 5,156 analyses have been uploaded for 2,237 patients in two clinics: NEOMED (1,030 patients, 2,345 analyses) and the newly connected CardioService (1,207 patients, 2,811 analyses). On average, that is 2.3 analyses and one combined summary per patient. The AI cost per patient is about 4,600 UZS ($0.38).

For clinics, each analysis is counted at about 2,000 UZS: the price of the most expensive type, ECG, plus its share of the combined summary (4,600 UZS / 2.3 analyses):

Package	Analyses / month	Package price / month	AI cost / month	Share of price
Starter	150	1.5M UZS	~300K UZS	20%
Standard	500	4M UZS	~1M UZS	25%
Professional	1,500	9M UZS	~3M UZS	33%
